GUIDE TO THE PREPARATION, USE AND QUALITY ASSURANCE OF BLOOD COMPONENTS – 14th Edition (2008)

The use of blood components represents the only therapy available for many seriously ill patients who suffer from acute or chronic diseases. The guide contains recommendations on blood collection, blood components, technical procedures, transfusion practices and quality systems for blood establishments and thus describes a set of measures designed to ensure the safety, quality and efficacy of blood components. It represents a key milestone in defining the “gold standard” for blood transfusion services and forms the basis for many national regulators in Europe and beyond. The guide to the preparation, use and quality assurance of blood components will be of interest to blood transfusion centres, regulators, health personnel and to all those working in the field of transfusion medicine.

ISBN 978-92-871-6330-1

The 14th Edition of the Guide is available in English and French.
